AKTISCHICHT

WOUND CARE SOLUTIONS

AKTISCHICHT's dressing is an innovative, phenomenal new product in chronic wound (a silent epidemic) healing, result of years of research in wound treatment, manufactured in a state-of-the-art production facility and categorized as an affordable active quality product.

This biological wound dressing has scaffolds similar to the structure of extracellular matrix with very specific polymers and architecture, facilitating accelerated reconstruction of the deep layers of the skin (i.e., derma). It makes it applicable as an affordable effective skin substitute (3rd line of wound therapy) even from the exposed bone level, at a cost comparable to the wound dressings (2nd line of wound therapy).

PROPERTIES

ACTIVE WOUND HEALING

MULTILAYER, FLEXIBLE, FORMABLE, ADHESIVE, 100% TRANSPARENT

ANTIBACTERIAL AND ANTIBIOFILM PROPERTIES

OPTIMIZING MOISTURE AND PH OF THE WOUND BED

FLEXIBLE AND ADJUSTABLE TO THE SHAPE OF THE WOUND BED

BIOCOMPATIBLE AND BIODEGRADABLE IN WOUND BED

USABLE IN ALL PHASES OF WOUND HEALING

REDUCTION OF SCAR TISSUE FORMATION

APPLICABLE ON EXPOSED TENDONS AND BONES

POROUS AND BREATHABLE DRESSING

APPLICABLE ON THE JOINTS WITHOUT RESTRICTING THE JOINT MOVEMENT

INDICATIONS

Diabetic foot ulcer (DFU)

Decubitus / bedsores / pressure ulcer

Burn wounds

Traumatic wounds

Skin grafts/donor sites

Surgical wounds

Venous leg ulcer (VLU)

Cavity wounds

Infected and non-infected wounds

Exposed tendons and bones

Dry wounds and wounds with low to moderate exudation (wound discharge)

- **Transparency**

Aktischicht provides maximum transparency enabling the clinicians monitor the wound healing process.

- **Antibacterial and Antibiofilm Properties**

The composite materials used in Aktischicht have antimicrobial properties that can significantly reduce the exudation and odor caused by the infection.

- **Modulation of Inflammation**

Aktischicht modulates the Inflammation reaction and physically prevents the entry of microorganisms into the wound.

- **Angiogenic Properties**

Aktischicht stimulates the angiogenesis in the wound bed that accelerates the regeneration of the skin, dermal repair and granulation tissue.

- **Facillitates Cell Migration**

The materials and 3D structure of Aktischicht facilitates the cell migration and shortens the wound closing time significantly.

- **Optimizing the Wound Bed PH**

Aktischicht optimizes the wound bed PH, so the enzymes such as elastase, collagenase, etc. will be inactivated, the homeostatic steady state of the wound will be maintained, and entering into the chronic wound phase will be prevented.
